

■ PROJECT DOCUMENTATION Online Course Management System

(Database: int_courses)

1 Introduction

The Online Course Management System is a database-driven application designed to manage online courses, students, administrators, and video learning content.

The system allows:

Admins to manage courses and videos

Students to enroll in courses

Students to access course-related video content

Role-based login using user authentication

The database name used: int_courses

2 Objective of the Project

To manage online course details efficiently

To maintain student registration records

To store and manage course videos

To implement role-based authentication (Admin & Student)

To maintain relationships between users, students, courses, and videos

3 Technologies Used

Database: MySQL

Query Language: SQL

Backend (if applicable): Java / Node.js (depending on your implementation)

Frontend (if applicable): React / JSP / HTML

4 System Architecture (Database Level) Users → Students → Courses → Videos

One user can be either Admin or Student

One student enrolls in one course

One course contains multiple videos
